
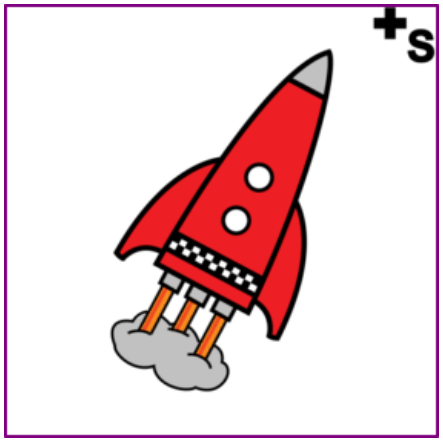
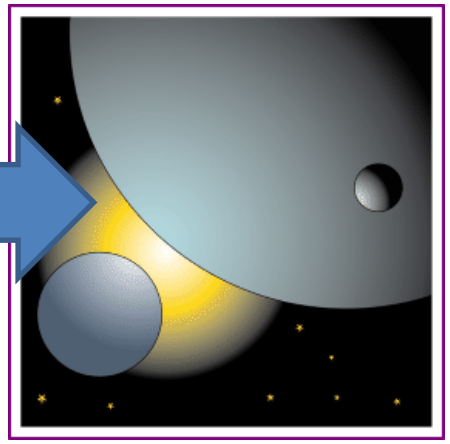
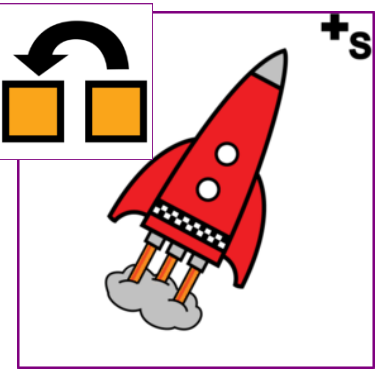
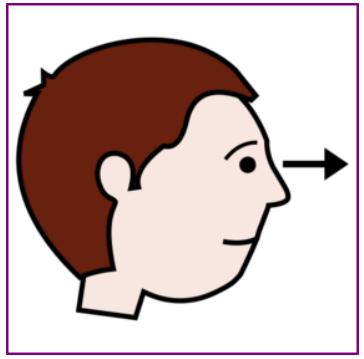
La Tierra, nuestro planeta

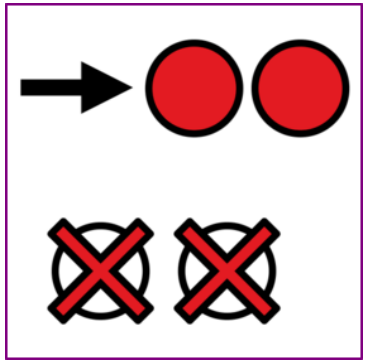




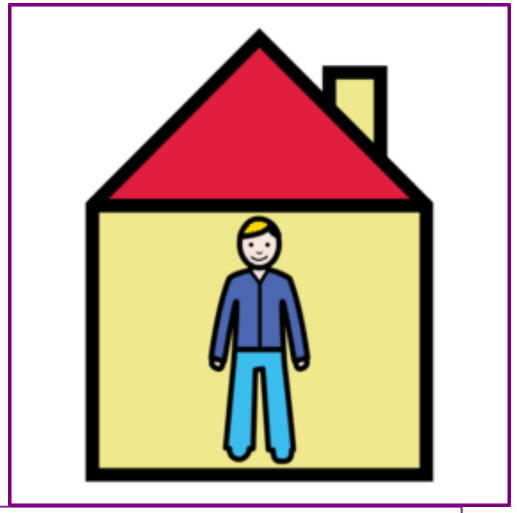
Con una nave espacial se vuela desde la Tierra al espacio



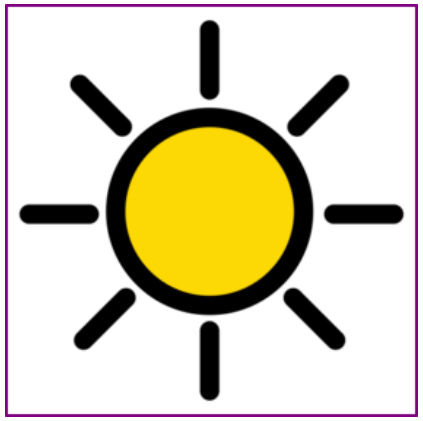


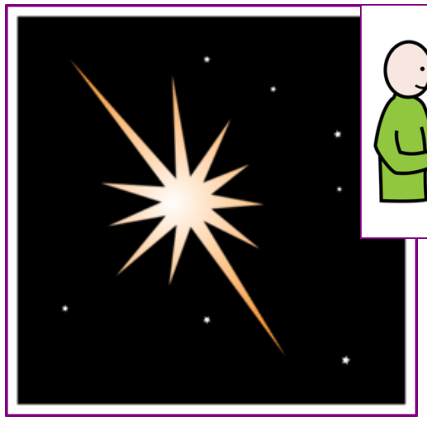


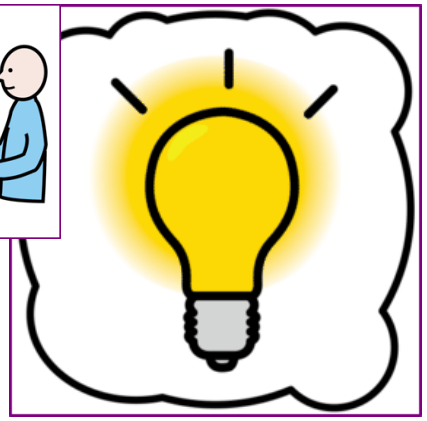
Desde la nave espacial se ve la Tierra y otros planetas

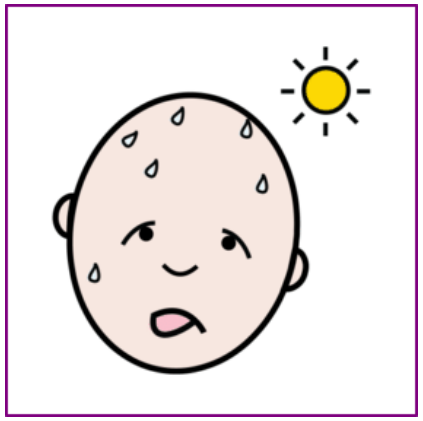


La Tierra es el planeta en el que vivimos

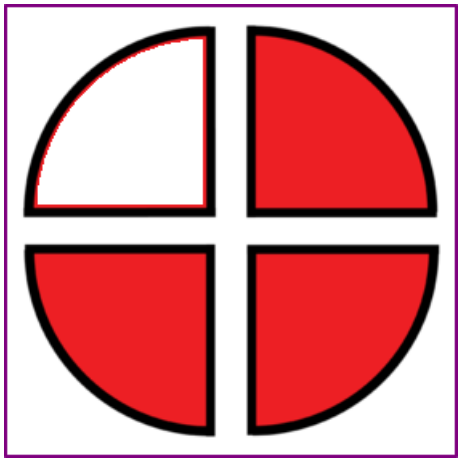


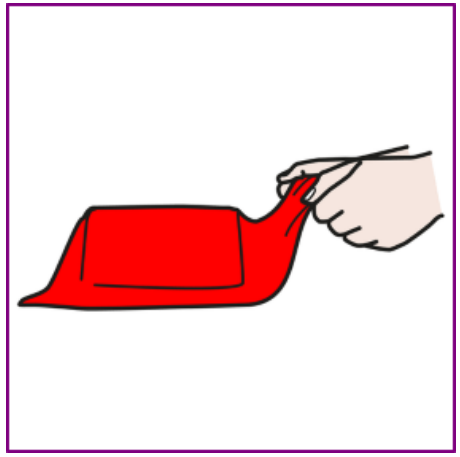




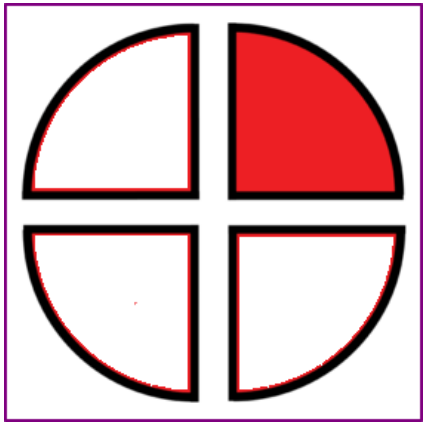


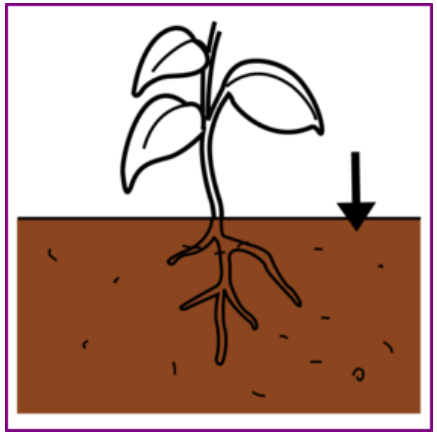
El Sol es una estrella que nos proporciona luz y calor



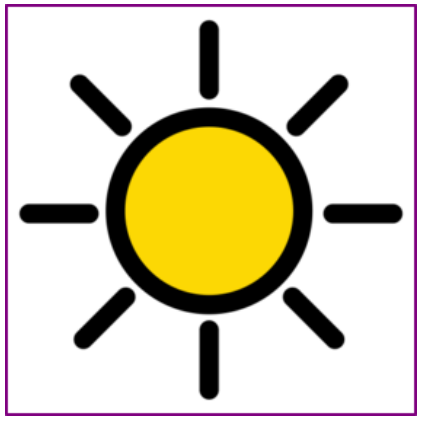


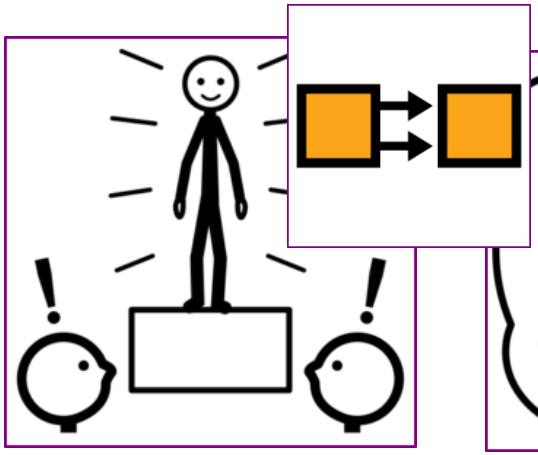
La mayor parte de la Tierra está cubierta de agua

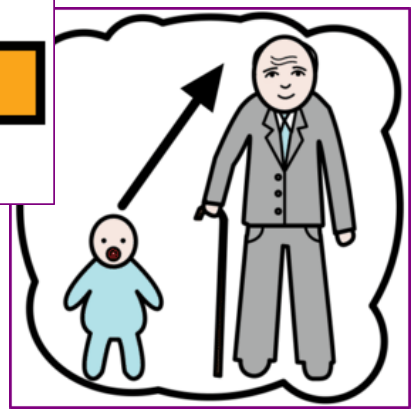




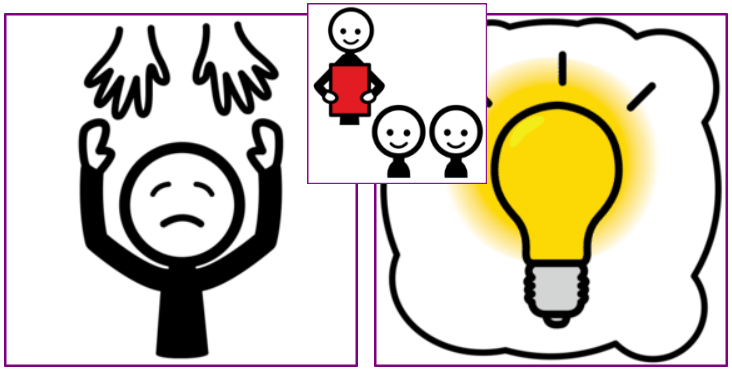
El resto es tierra firme

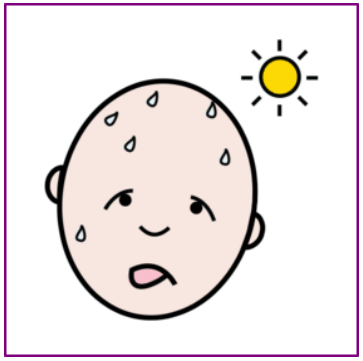


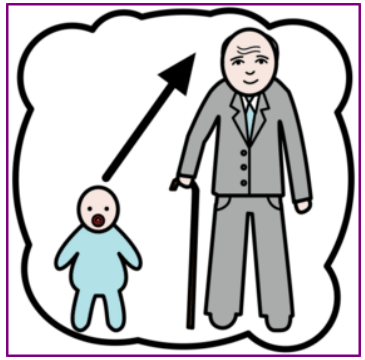




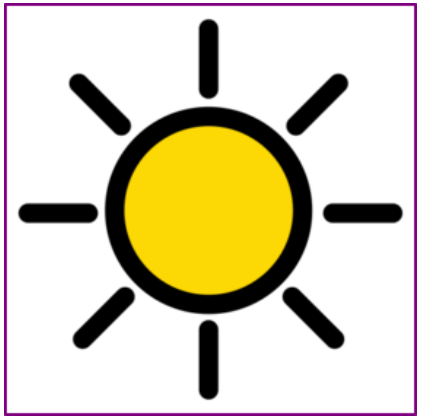
El sol es imprescindible para la vida en la Tierra



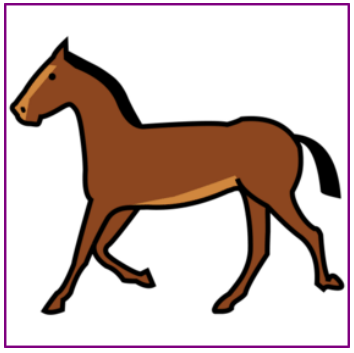


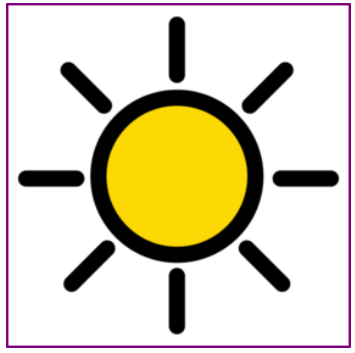


Los seres vivos necesitan su luz y calor para vivir

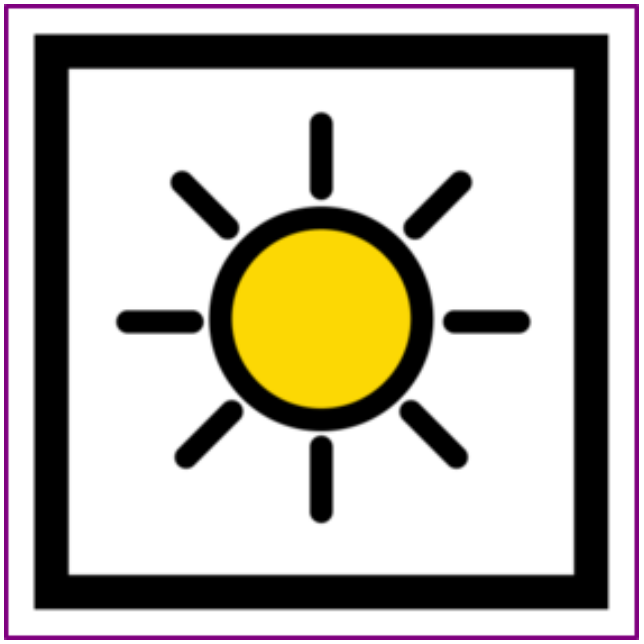


La roca no es un ser vivo, no necesita el sol

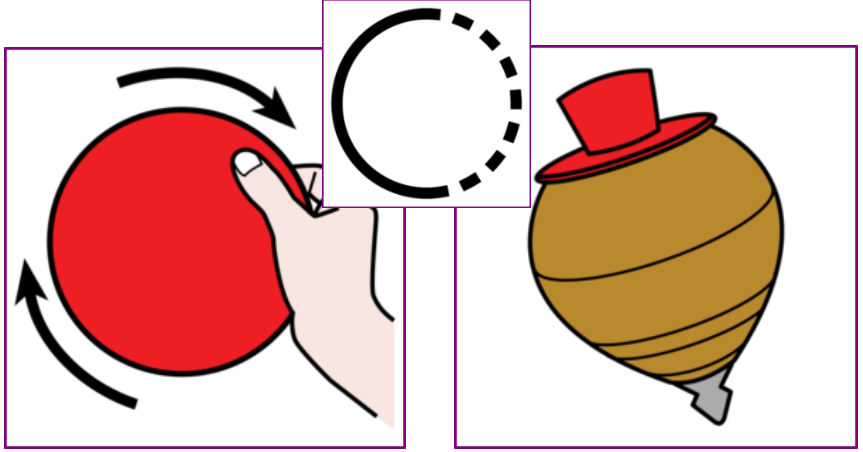


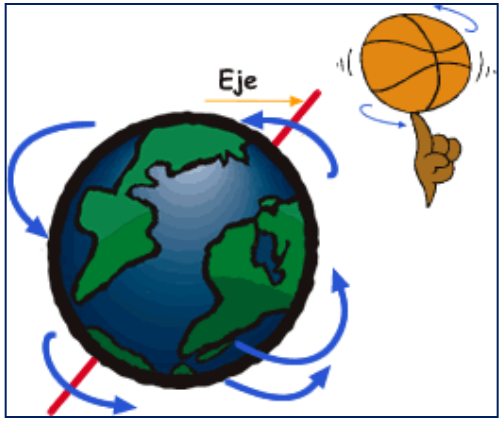


El caballo y las personas sí son seres vivos y necesitan el sol

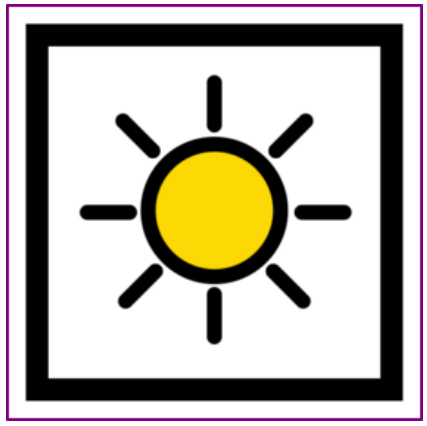


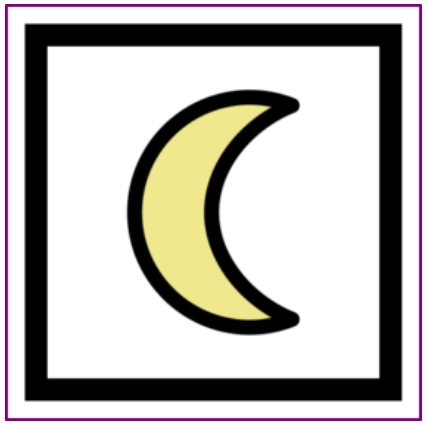
El día y la noche



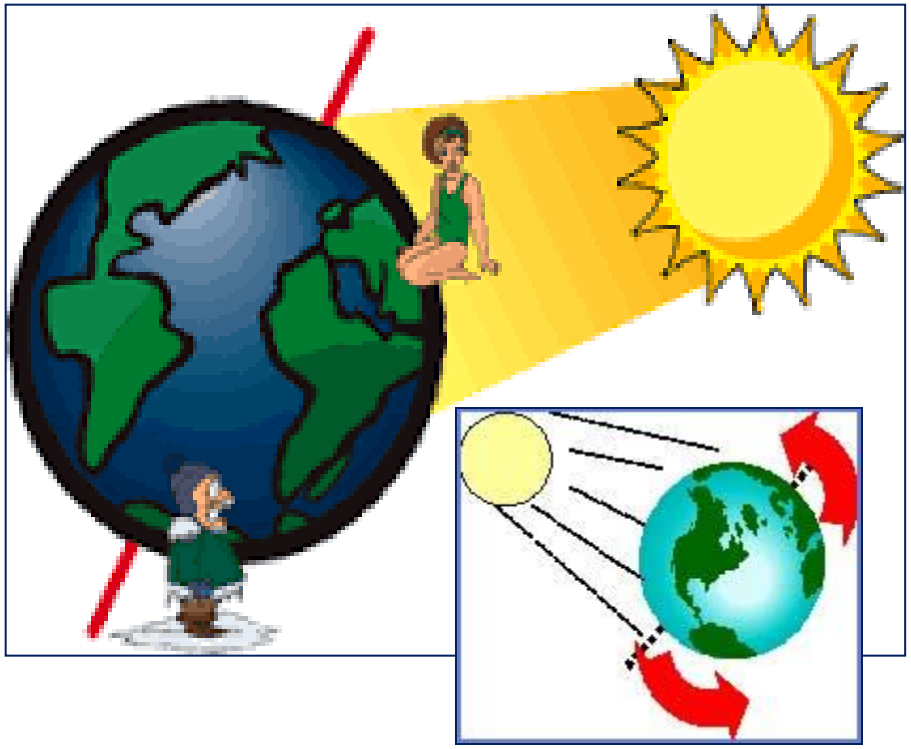


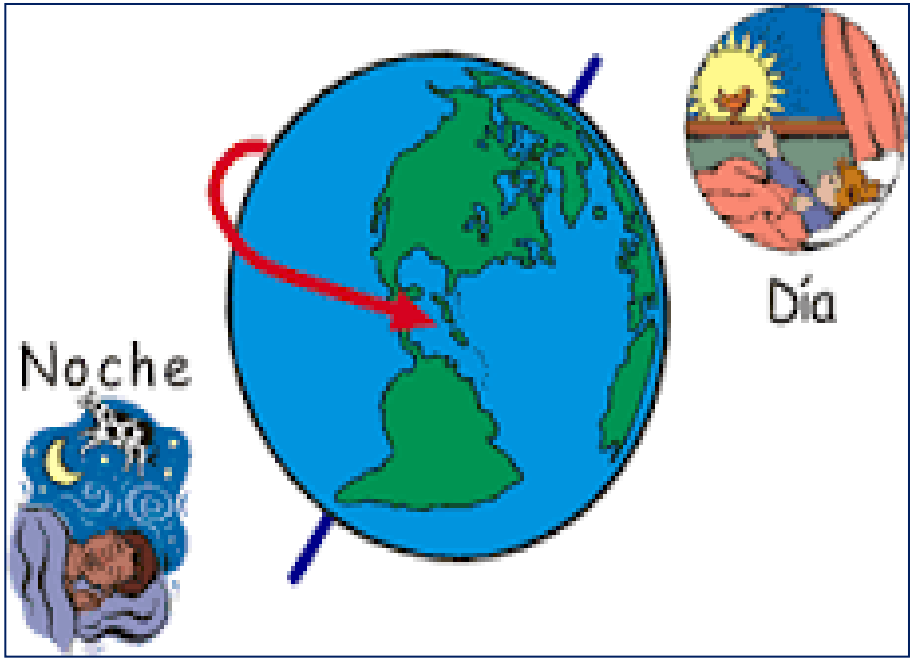
La Tierra gira sobre sí misma como una peonza



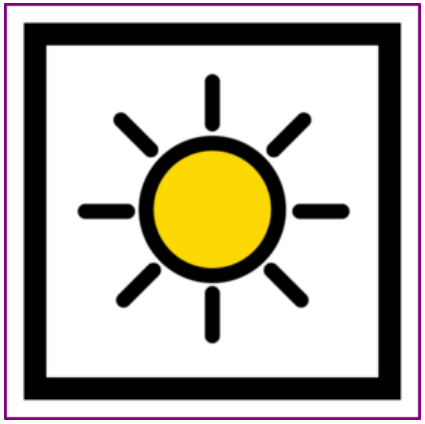


La Tierra tarda 24 horas en dar una vuelta completa.
En ese tiempo se suceden el día y la noche

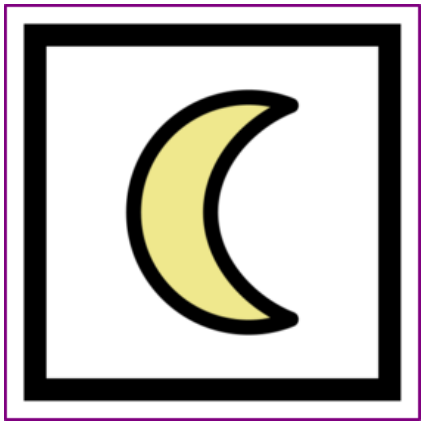




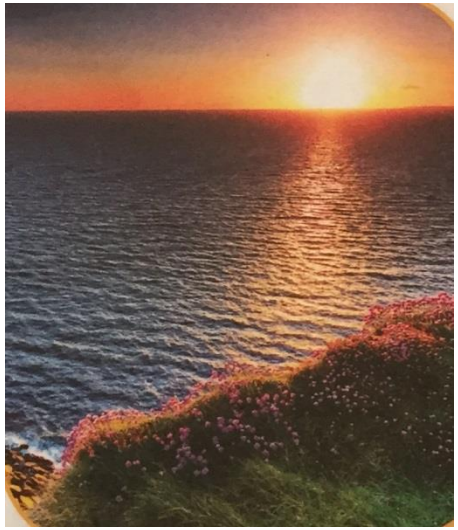
En la parte de la Tierra que está iluminada por el Sol es de día.
En la parte de la Tierra a la que no llega la luz del Sol es de noche



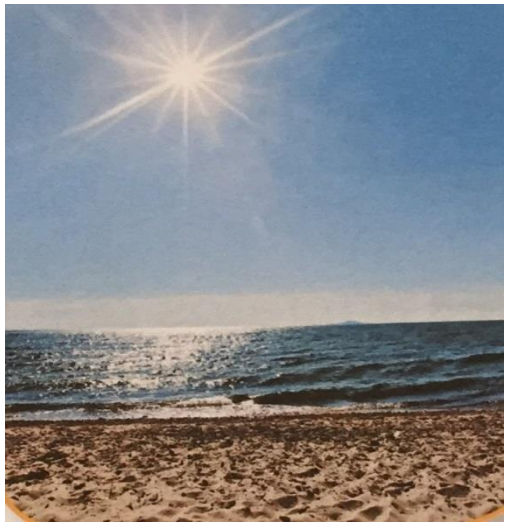
Durante el día voy al cole, juego o voy de excursión



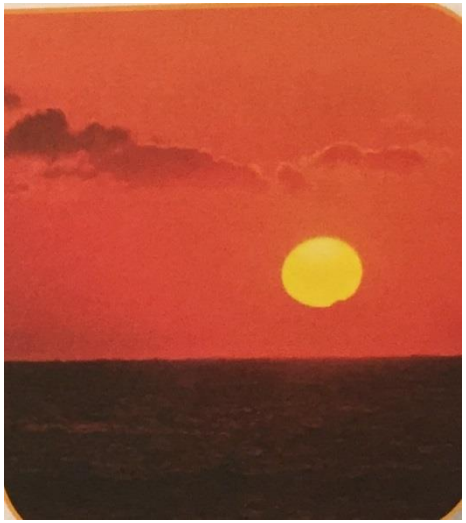
Durante la noche veo las estrellas, duermo o sueño



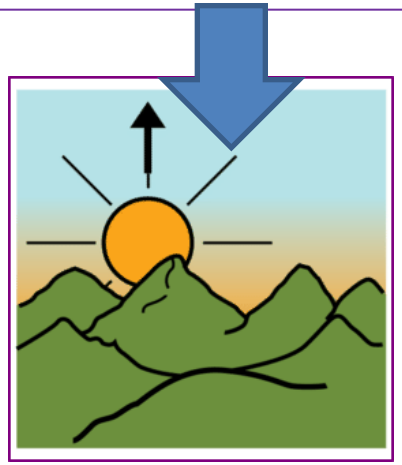
Amanecer



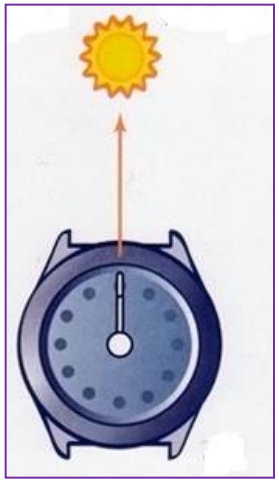
Mediodía



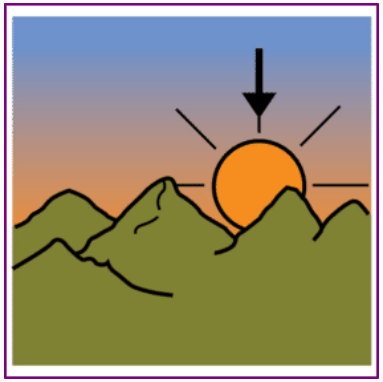
Atardecer



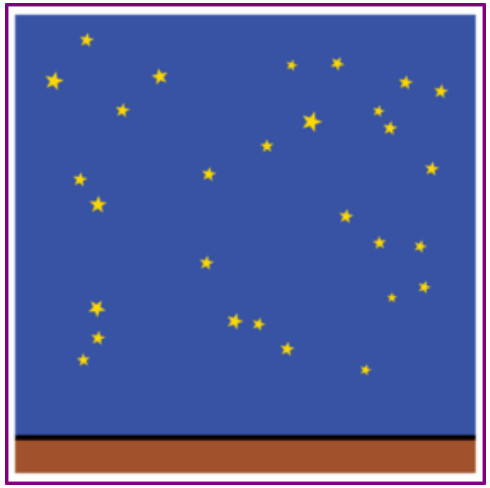
El sol sale



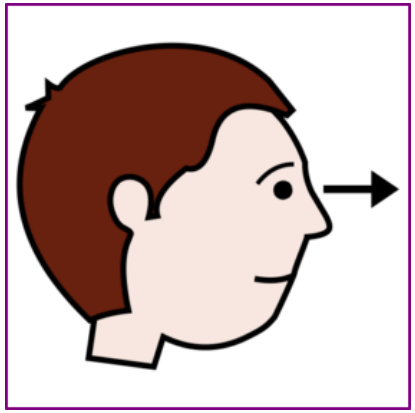
El sol está alto

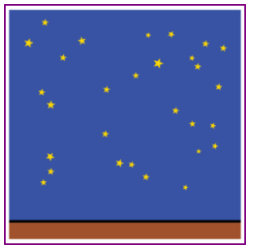


El sol se oculta

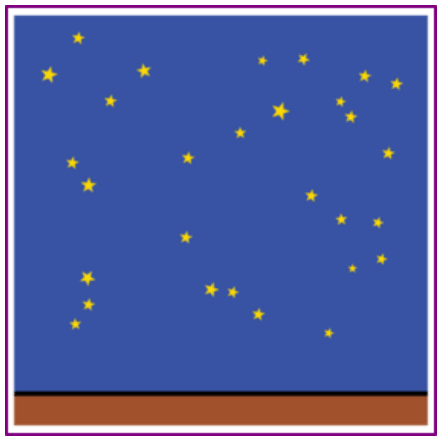


La luna y las estrellas

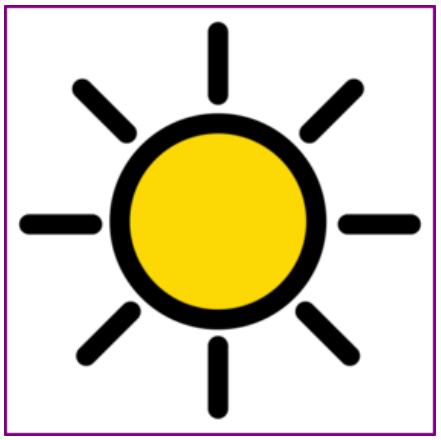


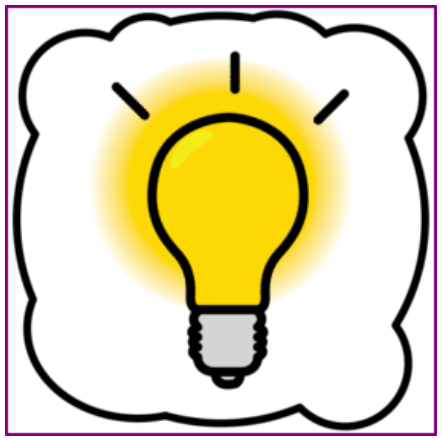


Por la noche podemos mirar en el cielo la luna y las estrellas

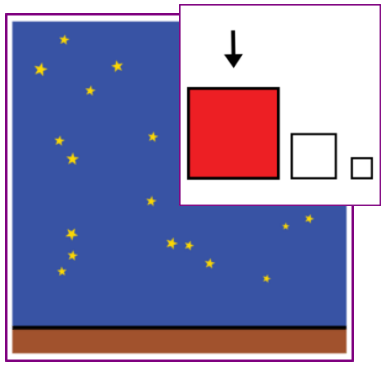


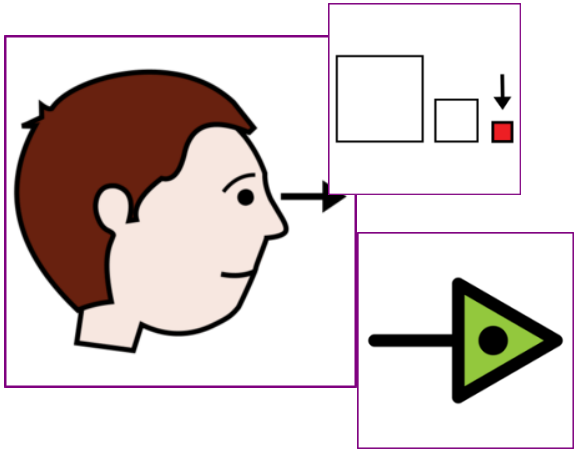
=

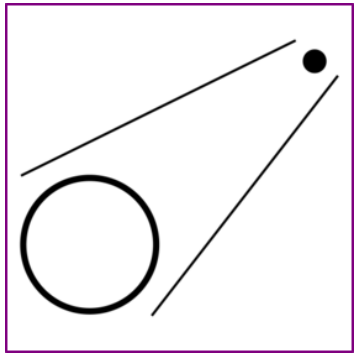




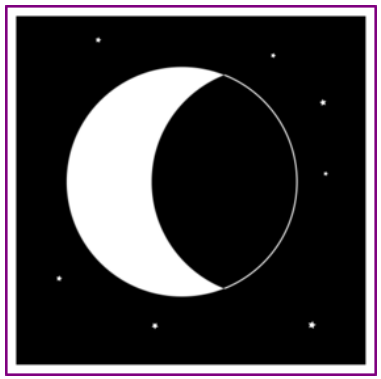
Las estrellas igual que el sol tienen luz propia



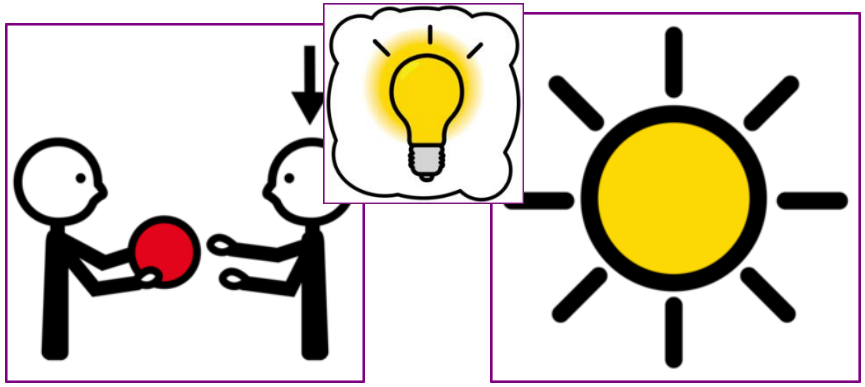




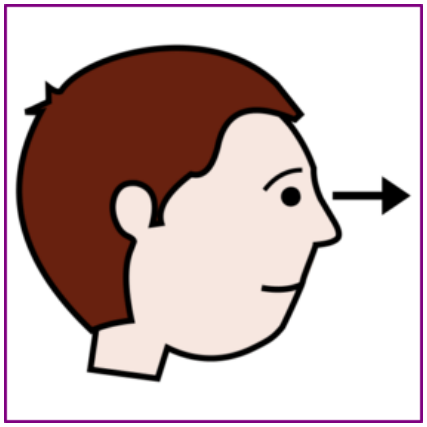
Las estrellas son grandes pero las vemos pequeñas porque están lejos de la tierra

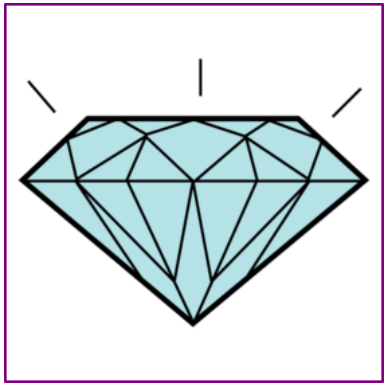


=

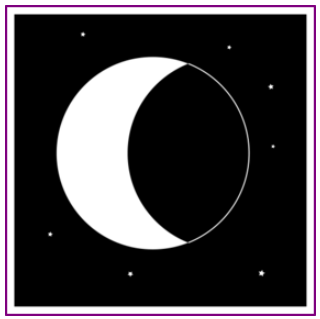


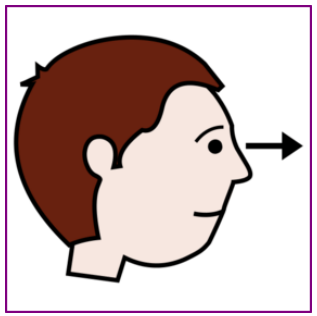
La luna al igual que la Tierra recibe luz del Sol

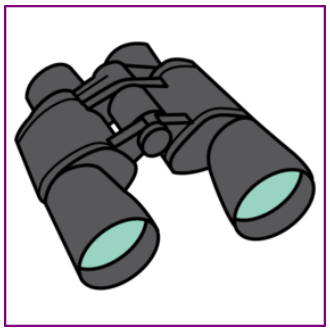


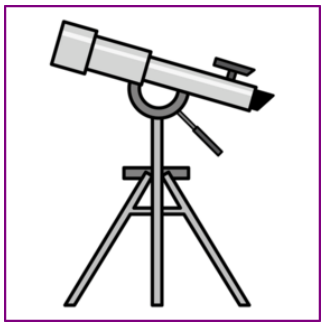


Por eso vemos la Luna brillante



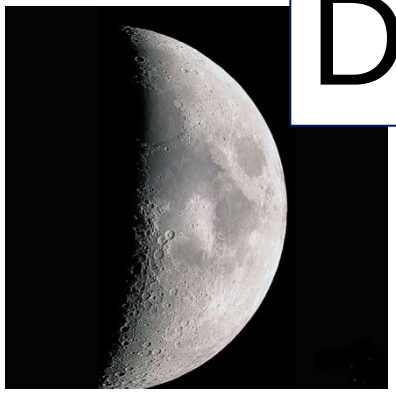






Podemos ver la luna con los catalejos, los prismáticos o el telescopio

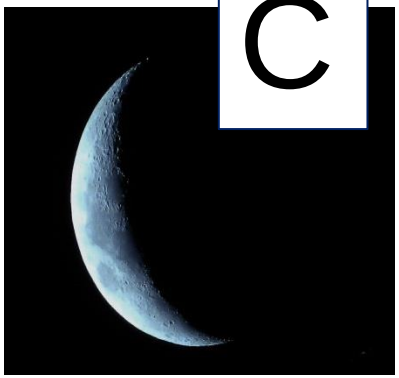
D



Cuarto creciente

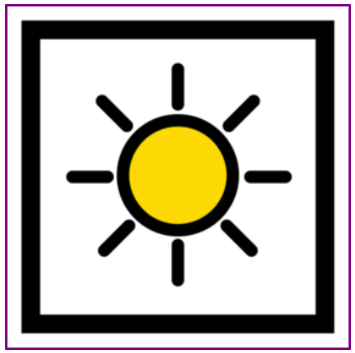
Luna llena

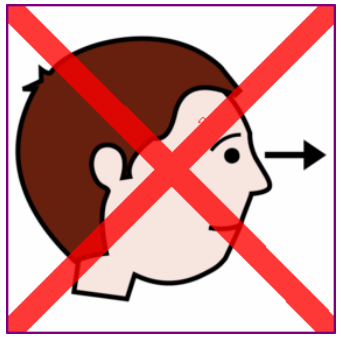
C

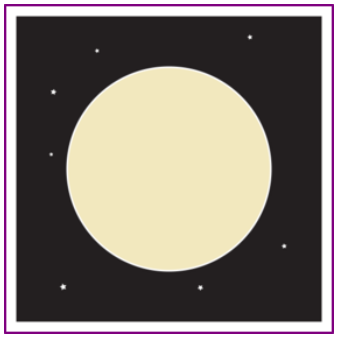


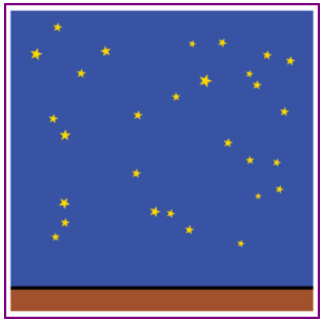
Cuarto menguante

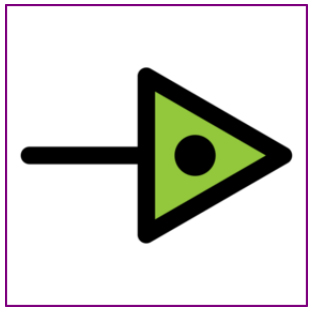
Luna llena



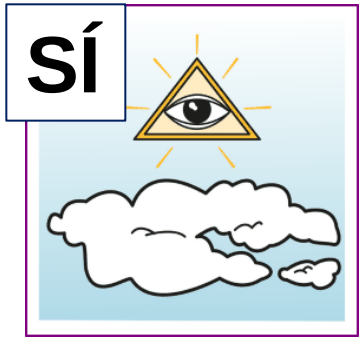


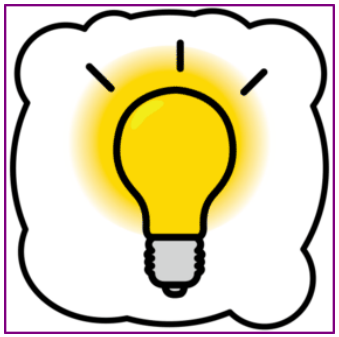


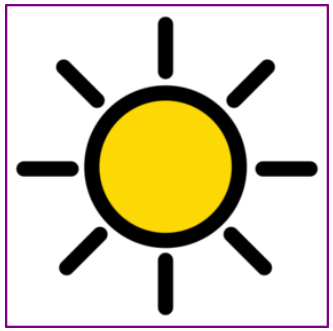


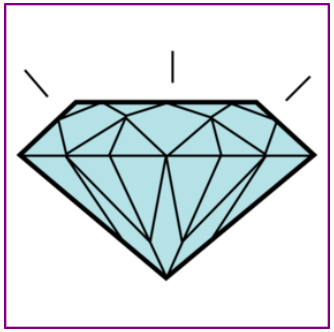


Por el día no vemos la luna y las estrellas porque

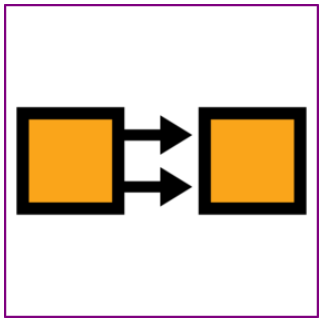


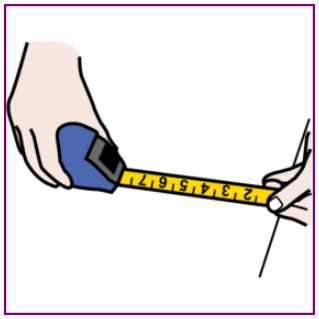


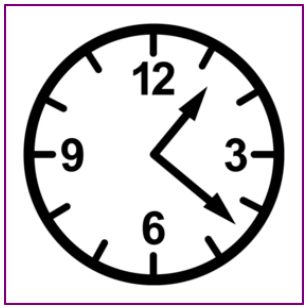


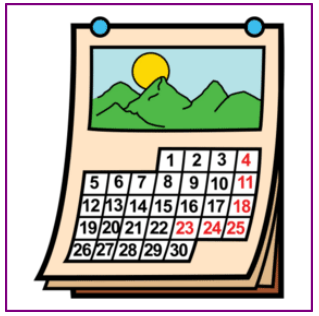


Sí están en el cielo pero la luz del sol es muy intensa y nos impide verlas

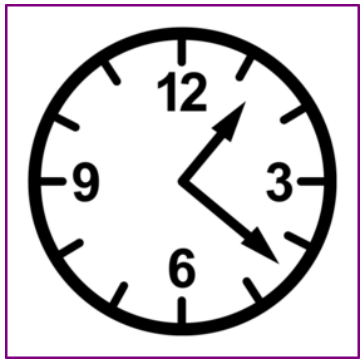


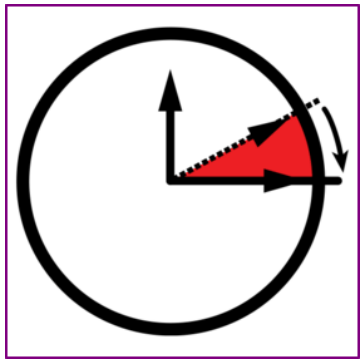




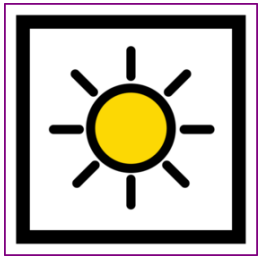


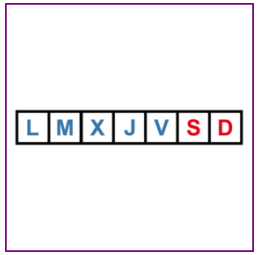
Para medir el tiempo necesitamos reloj y calendario

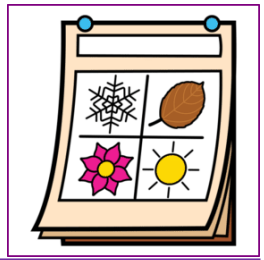




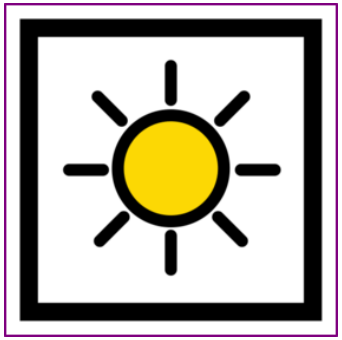
Con el reloj medimos las horas



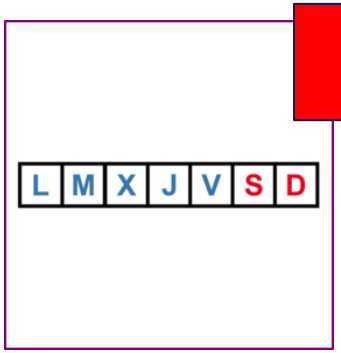




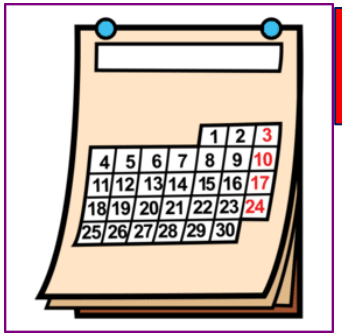
Con el calendario medimos los días, semanas, meses y años

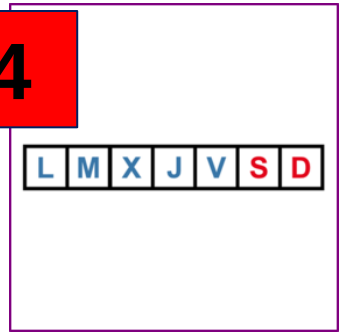


El día tiene 24 horas

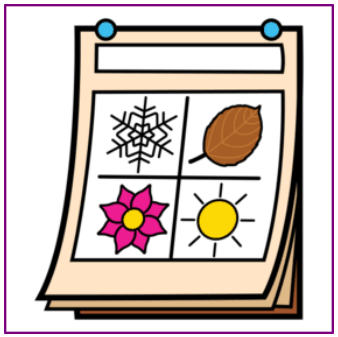


La semana tiene 7 días





El mes tiene 4 semanas



El año tiene 12 meses

Enero 2018

	Lun	Mar	Mié	Jue	Vie	Sáb	Dom
1	1	2	3	4	5	6	7
2	8	9	10	11	12	13	14

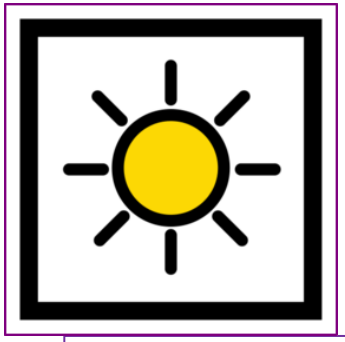
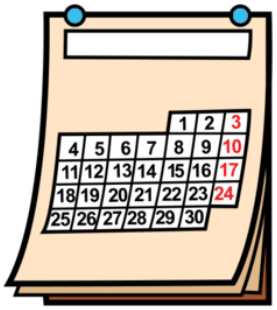
1	31						

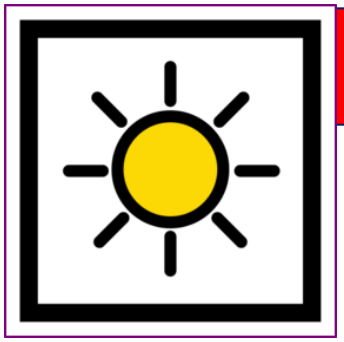


30



Hay meses que tienen 30 días

aa

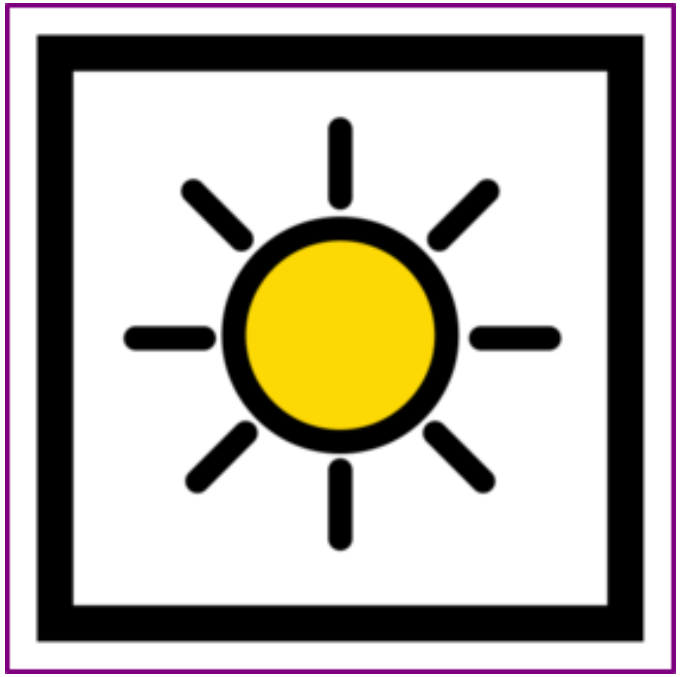


31

Hay meses que tienen 31 días

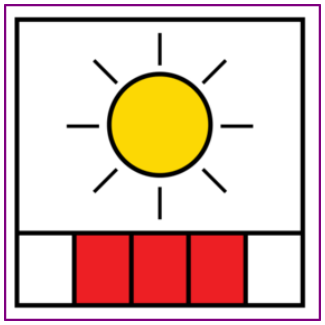
aa

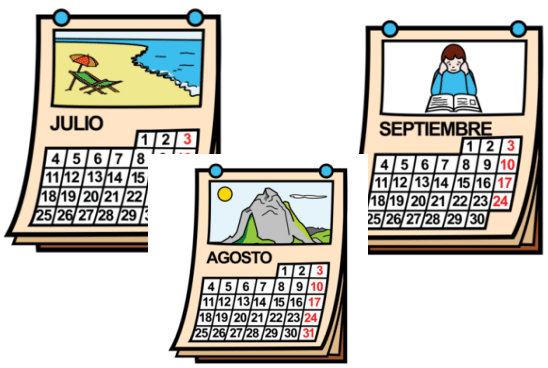
28



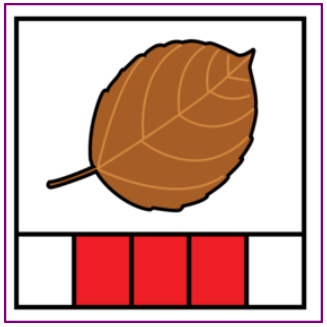
Y Febrero tiene 28 días

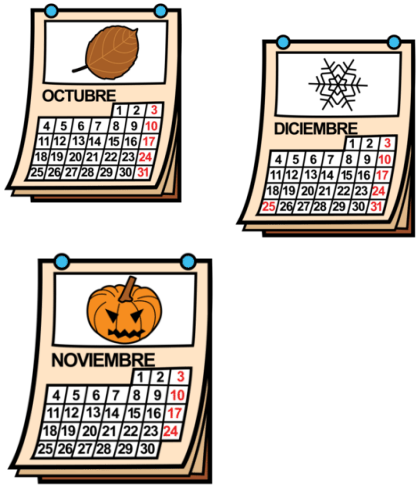
Primavera: abril, mayo y junio



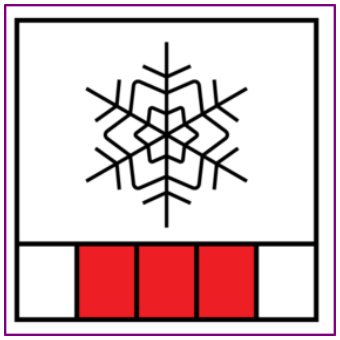


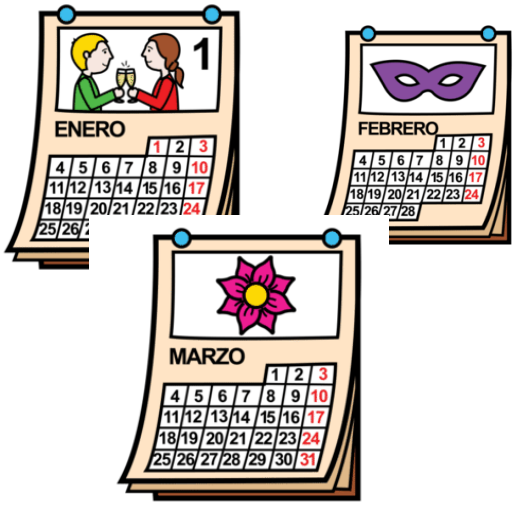
Verano: julio, agosto, y septiembre



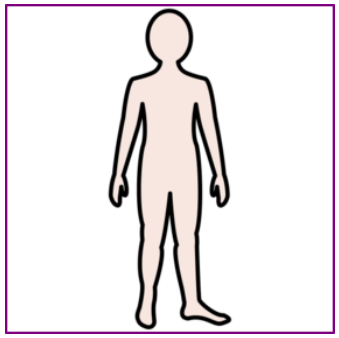


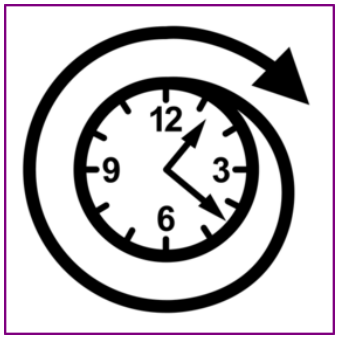
Otoño: octubre, noviembre y diciembre

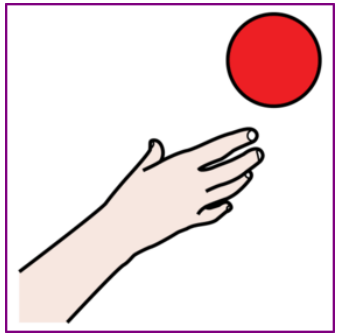


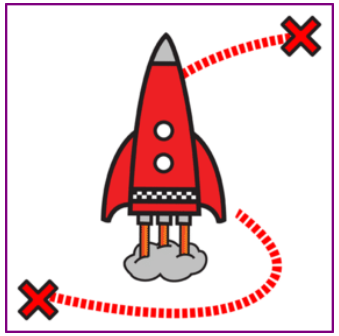


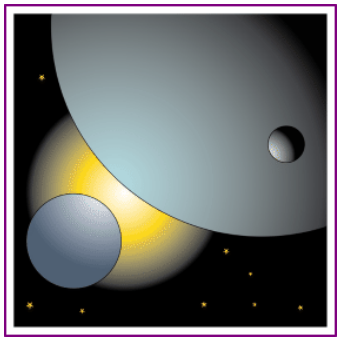
Invierno: enero, febrero y marzo



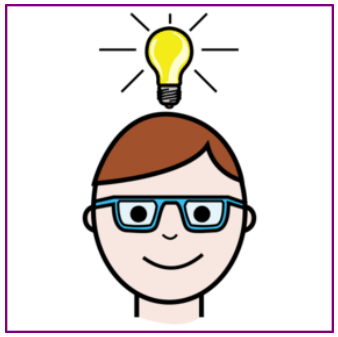


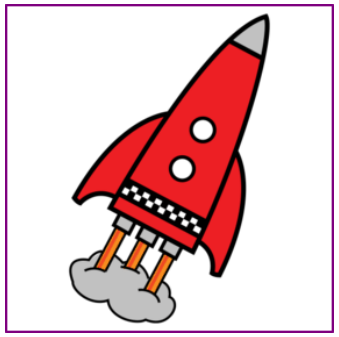


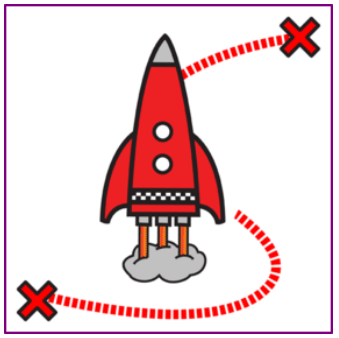


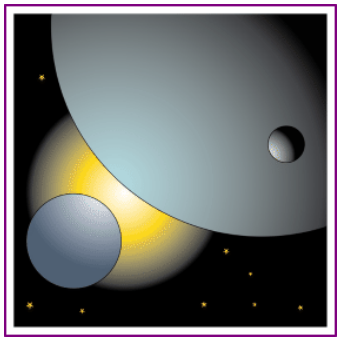


El ser humano siempre ha querido viajar al espacio



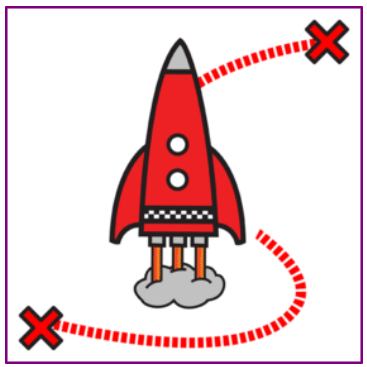


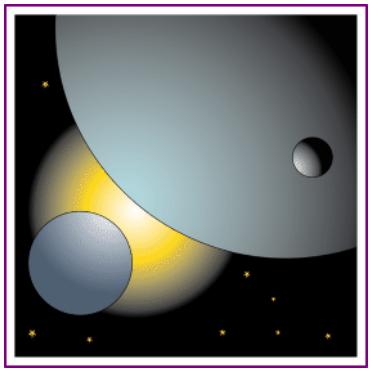




Por eso inventó el cohete para viajar al espacio

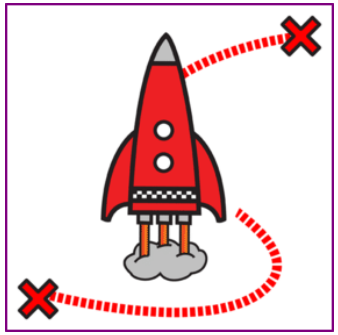
1er

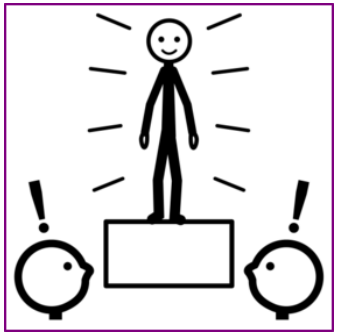




El primer ser vivo que viajó al espacio fue una perrita llamada Laika

1969





En 1969 el hombre viajó a la luna. Fue una gran hazaña

A mí me encanta la Tierra y los Planetas
